

The Maguire Micro-Blender: small blender...big savings.

Ideal for small processing machines.
110 lbs/hr - 50 kg/hr

Easy, safe access for fast cleanout.

Footprint is 6 in. x 6 in. -
15.2 cm x 15.2 cm.

Removable hoppers with integral dispense valves.

Vibration isolation allows mounting directly on the processing machine.

Pneumatically driven mixer.

actual height is 23.5 in. - 59.7 cm

For the first time, a blender has been designed for extreme accuracy specifically for small processing machines. Now precise weighing of blend ingredients is possible and you can control the metering rate with greater flexibility than ever before.

Dispense as little as one pellet per pulse cycle with Maguire's Micro-Pulse™ Technology.

It's all part of Maguire's drive to reduce equipment costs and to downsize weigh scale blenders for small processing machines.

The Maguire Micro-Blender includes the unique Micro-Pulse™ Technology, which virtually eliminates the need for augers to achieve accuracy when dispensing minor ingredients. The blender doesn't rely on heavy, less reliable motors so processors can be assured of long-term operation starting with a 5-year warranty.

Yes, blenders may be mounted directly on machines. Maguire technology allows for detection and elimination of load cell readings that are effected by shock and vibration of rapid-cycling equipment like injection molding machines.

The design and construction of the Micro-Blender is so safe, simple and reliable that it makes everything else obsolete. It's what you've come to expect from Maguire - a blender that's thought through, tested worldwide with no-nonsense operator benefits that really count. All for a very affordable price. By selecting Maguire you'll be choosing the blender that 4 out of 5 processors prefer. There's a lot more to learn about the Maguire line. So call or write for a free brochure or video. Or talk with a sales rep and ask for a Maguire.

Maguire puts you in control with this compact unit controlling up to four ingredients with complete flexibility.
